

Architect

ACME Technologies is the revolutionary, configurable and all-in-one visitor commerce relationship platform for cultural institutions, wineries, and attractions. Through ACME's single cart, your visitors can transact on the web, by phone, or in person and immediately enjoy the perks of membership. A cloud-based platform, ACME's open APIs allow integration with CRMs to deliver a 360-degree view of the visitor and other best-of-breeds systems. ACME's all-inclusive and joint-success approach removes barriers and delivers software, hardware, service, support, and upgrades with predictable pricing. ACME was founded and is led by Silicon Valley and cultural institutional veterans.

Overview:

Become our Architect, leading the technological evolution of our platform; helping us transition our current platform into a modern Microservices based system.

Requirements:

- Guru level Java engineer
- 8+ years of Java development using Tomcat, Maven, Spring and Spring MVC
- Hibernate and RESTful API development experience.
- A passion for technology, a love of writing code and a deep understanding of how to architect, build and deploy a best in class Microservices architecture
- Deep appreciation of what it takes to build software that **appears** to be simple but is actually solving highly complex problems in a simple way.
- Extensive exposure to SaaS platform development, SaaS architectural patterns and multi-tenant paradigms
- Experience with SQL databases, particularly MySQL
- Experience with NoSQL databases particularly MongoDB
- An inspirational character who can help guide and grow our current engineers
- A highly pragmatic thinker that knows when to use available tools / integrate 3rd party applications and when to build what they need
- A startup veteran, knows very well the challenges that a resource constrained organization faces.
- Jenkins

Strong problem solving and communication skills. Experience with Scrum and Agile methodology in a highly collaborative environment. Ideal candidate should also have some Finance or Retail experience.

Desirable Skills

- Experience with data warehousing technology and data analytics tools
- Microservices and Spring Boot
- Any other relational database experience PostgreSQL, MSSQL
- Any other NoSQL database experience Cassandra, CouchDB
- Kafka, ElasticSearch
- Familiarity with deploying with container technology, Docker preferred.
- Experience with consumer facing development and high reliability.
- Experience integrating with payment processors and gateways such as Stripe and Vantiv
- Intermediate Shell, Python scripting experience
